PROFESSIONAL SUMMARY

Frontend Software Engineer with 5+ years of experience building large-scale e-commerce applications using React, TypeScript, and Next.js. Experienced in frontend architecture, reusable component libraries, Storybook, performance optimization, experimentation platforms, and headless CMS integrations. Proven track record of leading high-risk migrations, reducing SaaS costs by 75%, automating internal workflows that saved 20+ hours per week, and delivering scalable customer-facing applications in cross-functional Agile teams.

CORE COMPETENCIES

React & Next.js

TypeScript & JavaScript

System Design & Frontend Architecture

Contentful CMS & App Framework

Performance Optimization (SSR/ISR/CDN)

Testing (Jest, Vitest, React Testing Library)

Observability (Sentry, Grafana, Elastic APM)

AWS CloudFront & DevOps

WORK EXPERIENCE

Software Engineer II

Jul 2023 - Jan 2026

Zalora Group, Remote

- Reduced annual SaaS costs by 75% by redesigning Segment event tracking with the Data Engineering team, lowering monthly tracked users from 7.7M to 1.9M while preserving business-critical analytics.
- Delivered a high-risk migration in 6 weeks by leading the migration of Login, Signup, and Unisex modules from a legacy PHP application to Next.js with zero rollbacks and zero production regressions.
- Improved application reliability by implementing Contentful CDN caching and query optimizations, eliminating a critical single point of failure while monitoring production systems using Grafana, Elastic APM, and Sentry.
- Saved marketing teams 20+ hours every week by building a standalone Next.js application using the Contentful Management API, Google OAuth, and API Routes to automate bulk content uploads.
- Reduced manual content operations by developing three custom Contentful App Framework applications that automated editorial and marketing workflows.
- Improved frontend scalability by designing a Contentful + AWS CloudFront architecture for video delivery, replacing the proposed Vimeo integration with a more maintainable solution.
- Contributed to a 70% increase in New Customer Conversion Rate (NCCR) by partnering with Product teams to implement A/B experiments using Optimizely and Mixpanel.
- Maintained critical authentication and analytics platforms by proactively identifying and resolving production issues using Sentry and observability tooling.
- Participated in frontend architecture discussions, code reviews, and technical interviews while mentoring engineers and contributing to engineering best practices.
- Collaborated closely with Product, Design, Backend, QA, and Data Engineering teams to deliver scalable customer-facing experiences.

Software Engineer

Jul 2020 - Jul 2023

Zalora Group (via Codingmart Technologies), Remote

- Accelerated category page development by 70% by architecting Zalora's first headless React component library from scratch and documenting reusable components with Storybook, enabling consistent UI development across teams.
- Improved application reliability by designing and implementing JSL (JSON Selector Language), a type-safe JSON extraction library used in production to safely consume dynamic API responses.
- Delivered secure payment integrations by implementing Multisys and Bridger Pay payment gateways for customer checkout experiences.
- Supported customer engagement initiatives by building frontend features and experiments for the Community Influencer Program in collaboration with Product and Engineering teams.

- Collaborated with cross-functional teams in an Agile environment to deliver scalable customer-facing features across multiple e-commerce domains.

PROJECTS

JSL (JSON Selector Language) Open Source

Designed and built a type-safe JSON extraction library for safely accessing deeply nested JSON structures. Published under the Zalora GitHub organization for production use.

TypeScript

Contentful Response Unwrapper

TypeScript utility that normalizes Contentful CMS API responses by unwrapping nested objects into plain, type-safe JavaScript objects. Published as an npm package. Built with Vite and tested with Vitest.

TypeScript

Splitpanunga

Full-stack expense-sharing application inspired by Splitwise. Built responsive React interfaces with an Express.js backend and PostgreSQL database.

React, Express.js, PostgreSQL

FriendFinder

Social networking application featuring authentication, real-time messaging, and user search. Implemented Elasticsearch-powered search and Socket.io real-time chat.

React, Express.js, PostgreSQL, MongoDB, Elasticsearch, Socket.io

Map.io

Interactive mapping application using the Bing Maps API to calculate routes and animate vehicle movement.

React, Bing Maps API

2048

Classic 2048 puzzle game built with vanilla JavaScript. Features tile-sliding mechanics, smooth CSS animations, and score tracking. Supports keyboard controls and mobile touch/swipe gestures via Hammer.js.

HTML5, CSS3, JavaScript (ES6+), Hammer.js

SKILLS

Frontend: React, Next.js, TypeScript, JavaScript (ES6+), HTML5, CSS3, Tailwind CSS, Redux, Zustand, Storybook

Data Fetching & APIs: REST APIs, GraphQL, TanStack Query, SWR by Vercel, TanStack Router

Performance & Architecture: Server-Side Rendering (SSR), Static Site Generation (SSG), Incremental Static Regeneration (ISR), Component Libraries, Headless UI Architecture, CDN Caching, Code Splitting, Lazy Loading, Responsive Design, Web Accessibility (WCAG)

CMS & Experimentation: Contentful, Contentful App Framework, Contentful Management API, Optimizely, Mixpanel, Segment

Testing: Jest, Vitest, React Testing Library **DevOps & Tooling:** pnpm, Docker, GitHub Actions, Jenkins, AWS CloudFront, Git, Turborepo

Observability: Sentry, Grafana, Elastic APM

Engineering: System Design, Frontend Architecture, Technical Mentoring, Code Reviews, Agile Development

EDUCATION

Bachelor of Engineering in Computer Science

2016 - 2020
